WHY?

The project is designed to support organization leaders and employees, to understand the strategic implications of sustainability by developing and using innovative and creative approaches. The training will drive leadership understanding, strategic business approaches, enthusiasm, innovation and consideration of environment and social aspects as key issues toward sustainable development.

FOR WHOM?

LeadSUS project goal is to create a training and certification program for European leaders that implement sustainable development concepts in the industrial and institutional sector organizations. This complex approach folds continuous learning in organization, meet the needs of continuous improvement and process integration of environmental and social responsibility in strict correlation with economic objectives. The project will refine management skills, will stimulate the eco-innovation and entrepreneurial spirit of all involved parties (employees, managers, trainers, etc..).

European Certification &
Qualification Association

European Certification and Qualification Association (ECQA) is an umbrella for the training and examination organizations. It gathers professionals in job role committees and issues the certificates. ECQA provides a common framework of rules, processes and structures for new management courses, professions and competencies. It ensures cooperation at regional, national and transnational level.

The purpose of LeadSUS training program is to acquire new management competencies, which will support sustainability leadership within organizations. This is achieved through a unified ECQA compliant course, exam and the certification, which is valid all over Europe.
